

JavaScript Objects

1-JavaScript objects

1. Create an object with properties name, age, and gender and print its values to the console.

Example:

```
Input: { name: "Adam", age: 25, gender: "male" };  
Output: Adam 25 male
```

2. Create an object and add a new property to it using dot notation.

Example:

```
Input: { name: "Adam", age: 25 }, gender: "male";  
Output: { name: "Adam", age: 25, gender: "male" }
```

3. Access the value of a property in an object using dot notation.

Example:

```
Input: { name: "Adam", age: 25 }, "name";  
Output: "Adam"
```

2- JavaScript Array

1. Create an array of numbers and use the `forEach()` method to print each element to the console.

Example:

Input: [1, 2, 3, 4, 5]

Output: [1, 2, 3, 4, 5, 6]

2. Use the `sort()` method to sort an array of strings alphabetically.

Example:

Input: ["apple", "banana", "cherry"];

Output: ["apple", "banana", "cherry"]

3. Use the built in method to apply the following A. `reverse()` method to reverse the order of elements in an array.

Example:

Input: ["apple", "banana", "cherry"];

Output: ["cherry", "banana", "apple"]

B. Use the `concat()` method to combine two arrays into a single array.

Example:

Input: [1, 2, 3], [4, 5, 6];

Output: [1, 2, 3, 4, 5, 6]

C. Use the `slice()` method to extract a portion of an array.

Example:

Input: [1, 2, 3, 4, 5, 6], 2, 4;

Output: [1, 2, 5, 6]

D. Use the `splice()` method to add and remove elements from an array.

Example:

Input: [1, 2, 3, 4, 5], 3;

Output: 2

E. Use the `indexOf()` method to find the index of a specific element in an array.

Example:

Input: [1, 2, 3, 4, 5];

Output: "1,2,3,4,5"

F. Use the join() method to convert an array to a string.

Example:

Input: "1,2,3,4,5";

Output: [1, 2, 3, 4, 5]

G. Use the split() method to convert a string to an array.

Example:

Input: [1, 2, 3, 4, 5];

Output: 5

7. Use the length property to find the number of elements in an array.

Example:

Input: [1, 2, 3, 4, 5];

Output: 1, 2, 3, 4, 5

8. Use the for...of loop to iterate through an array.

Example:

Input: [1, 2, 3, 4, 5];

Output: 1, 2, 3, 4, 5

9. Use the Array.isArray() method to check if an object is an array.

Example:

Input: [1, 2, 3, 4, 5];

Output: true
